

Arnix Platform - Client App Working Documentation

Executive Summary

The Arnix Platform is a hyper-local multi-vendor e-commerce ecosystem integrated with a custom referral and loyalty engine powered by Arnix Coins. The system consists of four interconnected panels: User/Customer Panel Seller Dashboard Panel Delivery Boy Mobile Panel Super Admin Command Center

1. E-Commerce Transaction Lifecycle

Workflow Overview:

Customer browses stores, adds products to cart, applies coupons or Arnix Coins, and places orders using COD or prepaid methods. Orders are split automatically by seller ID. Sellers process and prepare orders for dispatch. Delivery boys accept deliveries, collect COD payments if applicable, and complete delivery verification. Finally, Admin reconciles payouts, commissions, and wallet balances.

2. Arnix Coins MLM Reward Engine

The loyalty engine automatically distributes Arnix Coins once an order is marked as delivered. Seller deduction default: 7% Customer self-reward: 2% Level 1 referral reward: 1% Level 2 referral reward: 1% Missing referrals redirect rewards back to the Admin account. Duplicate processing is prevented through idempotency protection.

3. User / Customer Panel

Core Features: Dynamic Home Page with promotional banners and category layouts Specialized niche storefronts Multi-vendor cart splitting and unified checkout Order tracking and PDF invoice generation Referral network tracking and Arnix Coin wallet management

4. Seller Dashboard Panel

Core Features: Business analytics dashboard Product catalog and stock management Tax configuration setup Order processing pipeline Cash-on-delivery settlement management Wallet and sales reporting

5. Delivery Boy Mobile Panel

Core Features: Delivery dashboard with active order statistics Nearby dispatch order listing Navigation and delivery confirmation Cash liability tracking Earnings and payout history

6. Super Admin Command Center

Core Features: Dynamic category and catalog management Seller, customer, and delivery boy verification Coupon and marketing campaign management MLM loyalty and referral configuration Cash reconciliation and withdrawal processing

7. Platform Engine Specifications

Dynamic Split Order Engine: Automatically groups products by seller and creates separate child orders while maintaining a unified payment experience.

Auto MLM Coins Engine: Executes loyalty distribution immediately after successful delivery and supports return-based reversals and refunds.

8. Deployment & Execution Plan

Reset and seed staging database Configure loyalty percentages and tax settings Create sandbox accounts for seller, delivery boy, and customer Run complete purchase and delivery testing flow

Conclusion

The Arnix Platform provides a complete scalable ecosystem for multi-vendor commerce, logistics management, and referral-driven loyalty engagement. The platform is optimized for real-time operations, financial tracking, and seamless collaboration between customers, sellers, delivery agents, and administrators.
